The Minister,

Communications and Digital Economy,

Plot 1253, Cadastral Zone, C6,

Mbora, Abuja.

PROPOSAL FOR PROVISION OF SOLUTION TO NIGERIA'S INSECURITY PROBLEMS

Due to the tragic security issues some of our family members have been victimized by the insurgency happening in this country few years back as well as the insecurity situation Nigeria is currently facing this days, we decided to idealize and come up with a profound permanent digital solution capable of eradicating the security issues Nigeria and other nations around the world are facing. We Qvortex Software Solutions intend to help the Nigerian government and Military on creating a convenient and Sustainable Digital Emergency Response System that will possibly encounter and terminate all security threats in the country.

The Ministry of Communications & Digital Economy is needed for the implementation and Success of this Emergency Response System.

We are requesting to be opportune to have an appointment in order to make a presentation to the Minister of Communications & Digital Economy; Dr. Isa Ali Pantami and be granted the contract to build the system so it could be implemented to secure our great Nation, Nigeria. For it will be a great help to our country by not only saving lives but also creating thousands of jobs in the Security & IT sectors.

Attached is a proposal document that describes the problem statement, our solution, and design on how the system works, and its costs.
